

Haleemah and ET's method for finding the total number of tiles in the border of a square pool with 10 tiles on a side resulted in the arithmetic expression  $(10 \cdot 4) - 4 = 36$ .

1. Apply Haleemah and ET's method to find the total number of tiles in the border of a pool with 7 tiles on a side. Circle and label the drawing to show how their arithmetic is connected to the pool.

Haleemah and ET's method for finding the total number of tiles in the border of a square pool with 10 tiles on a side resulted in the arithmetic expression  $(10 \cdot 4) - 4 = 36$ .

2. Apply Haleemah and ET's method to find the total number of tiles in the border of a pool with 15 tiles on a side. Circle and label the drawing to show how their arithmetic is connected to the pool.
