

Haleemah and ET's general equation for finding the total amount of money the friends spent was  $3c + 2c + 4c = T$ , where  $c$  is the cost per app and  $T$  is the total amount of money spent by the friends.

Danyal	Suado	Kiaan
		
3 apps	2 apps	4 apps

1. Use a *different* method to find how much the friends will spend altogether when each app costs \$4.

2. a. Write an **algebra** equation that generalizes this method.

b. For each variable you use, write a sentence explaining what that symbol means in the game app context.
