

This drawing represents a cobblestone pattern with an unknown Size Number.

Haleemah and ET found the following algebraic equation to represent the total number of gray cobblestones for an unknown size number:

$$\frac{x \cdot x}{1} + \frac{x \cdot x}{2} + \frac{x}{3} + \frac{x \cdot x}{4} = \frac{T}{5}$$

Describe what each part of the equation means in the cobblestone pattern context. Make sure to label the drawing as you work.
