

Jack is given a magical plant that grows unimaginably high. When Jack is first given the plant, it is nothing more than a sprout. After a day passes the beanstalk is 4 times as high as it was when Jack first received it. After another day passes, the beanstalk is 4 times as high as the previous day. This continues as the beanstalk shoots into the sky.

1. Make a drawing of the beanstalk over the first few days, so that we can see it quadrupling from each day to the next.
