Task: Use a diagram to show how long the red car should take to travel 200 miles so that it goes the same speed as the blue car.

1. Create a diagram to show how long the red car should take to travel 200 miles so that it goes at the same speed as the blue car, which travels 10 miles in 4 minutes.

2. When you used number sentences to solve the same speed problem, you used the multiplication operation. Label your diagram to show where the multiplication comes from.
